WASTE TO WONDER WORLDWIDE

IT Disposal with Purpose and Savings

MITAD

Clearing out IT equipment shouldn't just mean handing it over and forgetting about it — it can be a genuine opportunity to strengthen your ESG position while protecting your business.

Powered by MiTAD

Through our partnership with MiTAD, Waste to Wonder Worldwide offers a fully managed, secure disposal route for your redundant IT assets, including laptops, PCs and servers. Our Ethical IT Disposal service provides secure processing and documented data destruction to support your organisation's UK GDPR obligations.

In return, Waste to Wonder Worldwide receives suitable devices that meet a strict reuse and longevity threshold, along with funding generated through MiTAD's processing — funding that goes directly into our Borewell Project in The Gambia, which has delivered clean water to over 60,000 people.

Visit MITAD website

How and Why?

Funding generated through MiTAD's processing of your IT assets goes toward our Borewell Project in The Gambia, which has already delivered clean, renewable drinking water to over 60,000 people. Your old tech helps build wells, not landfill.

Secure, Compliant Data Destruction

MiTAD's collection and processing is carried out to NIST SP 800-88 and GDPR standards, with a Certificate of Data Erasure for every device.

Assets are collected using secure vehicles with a documented chain of custody and transported directly to MiTAD's secure processing facility, where access is restricted to authorised personnel and assets remain fully traceable throughout the process.

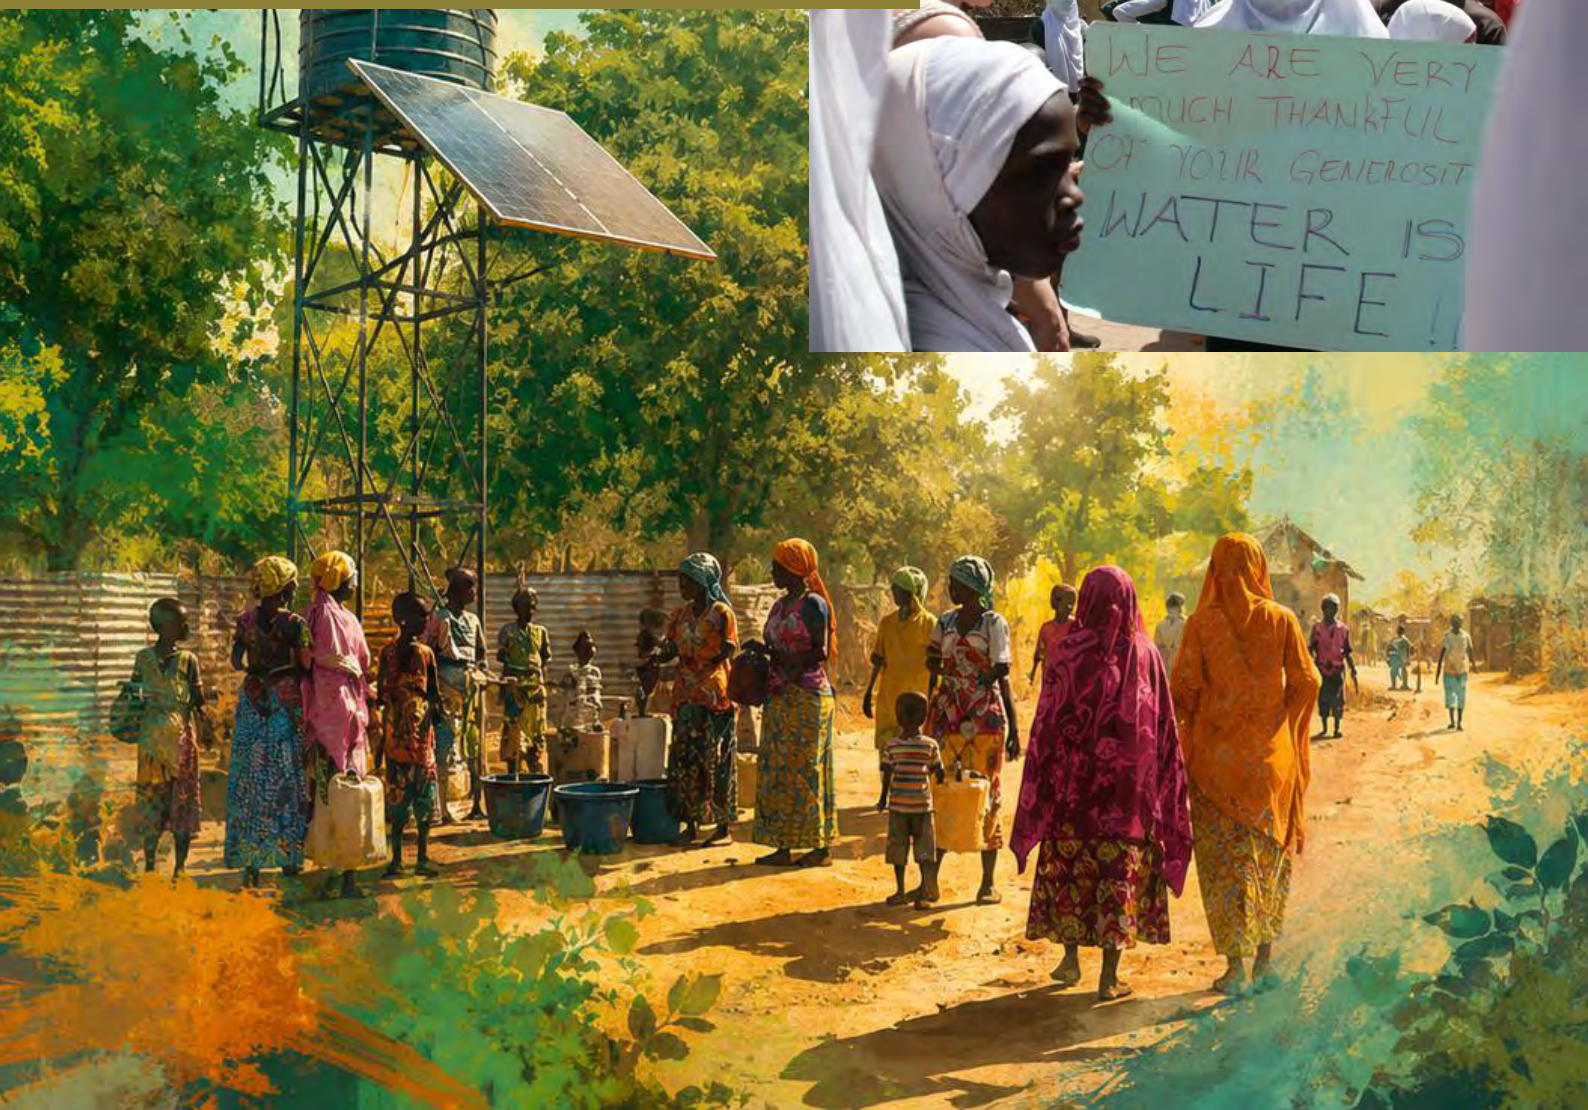
Why Fund Water, Not Just Donate Equipment?

From workplace asset to water source

It would be easy to assume that the best use for old IT equipment is to ship it straight to schools in the developing world. We don't think that's the whole picture.

One of the biggest barriers to education in the developing world isn't a lack of IT — it's a lack of safe drinking water. Without it, children can't attend school consistently, regardless of what equipment is in the classroom.



We're also mindful that IT equipment carries a different risk to the furniture and equipment we redistribute every day.

Electronics contain batteries and materials that need specialist, certified processing to handle safely — so a device that doesn't meet a high threshold of reusability and longevity is better recovered for value through MiTAD than sent onward as a donation, turning today's good intention into tomorrow's landfill.

That's why, through MiTAD, only equipment that clears a strict reuse and longevity bar is redeployed. The funding generated from the rest goes toward unlocking something that removes a genuine barrier to school attendance: clean water. It's a more honest way to create impact — and one that doesn't leave a legacy of waste behind it.

MEET KETA!

For 65 years, Keta's village lived without safe running water.

Today, thanks to a solar-powered borewell, more than 1,500 people have access to clean, reliable water.

Keta's greatest hope is that one day his children and grandchildren will be able to help others, just as his community was helped.

Our Step-by-Step Secure IT Collection Process

1. Tell Us What You Need Collected

Contact Waste to Wonder Worldwide with your location and what needs collecting. We'll arrange the collection on a suitable date, sending an ETA and crew details the working day before.

2. Collect, Pack & Deliver

Vetted staff scan assets, record item counts and securely palletise equipment on site. You sign the collection record before it's transported directly to MiTAD's secure processing facility in GPS-tracked, hard-sided vehicles, with a documented chain of custody.

3. Record & Track Your Assets

At MiTAD's secure, monitored facility, authorised staff log each device's asset tag, serial number and specification. Company labels and identifying marks are removed, and a unique ID barcode is applied to each asset, ensuring full traceability throughout the process.

4. Data Destruction

Data is either erased or physically destroyed, based on your instructions and/or the outcome of the data erasure process. Data is erased in line with NIST SP 800-88, with physical destruction carried out when requested or when drives fail the erasure process, with zero tolerance for data risk.

5. Reuse First, Recycle Responsibly

Suitable devices are prepared for donation through Waste to Wonder Worldwide. Remaining equipment goes through value recovery and responsible recycling in line with WEEE regulations, with funds generated supporting our Borewell Project in The Gambia.

6. Clear Reports for Your Records

Asset reports confirm equipment details, such as make, model, specification, condition and final outcome, alongside tamper-proof data erasure reports and/or destruction certificates, supporting your audits and ESG reporting.

Ready to Clear Your Redundant IT?

Email info@wastetowonder.com to arrange your collection and turn old technology into lasting community benefit.

Understanding the

Ethical Clearance Process

1. Survey

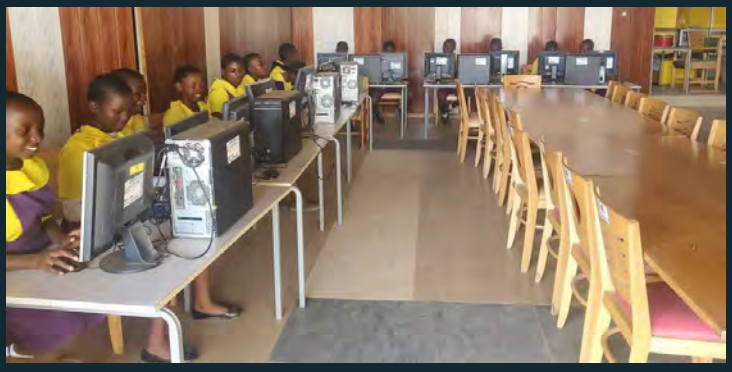
We arrange a site survey to assess access and egress, identify the items to be ethically cleared, and determine the labour, logistics, and reuse/recycling routes required. This information is then used to prepare a detailed quotation and costing proposal.

2. Ethical Clearance

All processes adhere to high ethical standards, focusing on reuse and redistribution. We are Safe Contractor and ISO 14001 approved; we are also NCZ Platinum Carbon Neutral Certified with our service delivering Better than Carbon Neutral results.

3. Redistribute

We ensure items are directed to organizations and communities domestically and internationally where they can have the most impact.



4. Report

Detailed ESG reports are provided, showcasing the environmental and social impact of the clearance. Filmed Case Studies can also be produced, examples of which can be found at www.wastetowonder.com

WASTE TO WONDER WORLDWIDE

We proudly hold the following

Accreditations, Memberships and Awards.

Accreditations

Neutral Carbon Zone (NCZ) Platinum Certified
People and Planet First: Verified Social Enterprise
SafeContractor - Health and Safety Approved
SafeContractor - Sustainability Approved (Gold)

Named as a Future 100 company by the UAE Ministry for the Economy
Social Enterprise Awards: Prove It - Social Impact Award

The King's Award for Enterprise in Sustainability 2026

Waste to Wonder Worldwide is a 2026 recipient of The King's Award for Enterprise in Sustainability — the UK's highest official business accolade, personally approved by His Majesty King Charles III. First established in 1966, the Awards represent the gold standard of British business achievement. Just 36 companies across the UK were recognised in the Sustainability category in 2026 — each selected for outstanding, measurable impact over a minimum of three years, aligned with the UN's Global Sustainable Development Goals. For us, it's the ultimate confirmation of something we've always known: sustainability isn't part of what we do. It's the foundation.
